

Pivotal Body For Multi-Function Nozzles

ABSTRACT

The Pivotal Nozzle Body disclosed comprises an upper housing **50**, and lower housing **30** which are pivotally connected to each other and can swivel with respect to each other about a pivot axis **40**. Upper housing **50** and lower housing **30** have a first tool end **55** and a second tool end **34**, respectfully. Both first and second tool ends are designed for mounting vacuum tools. Both first and second tool ends are designed to accept a hose wand for communicating suction air to the opposite side of the pivotal nozzle body. Whereby, both the vacuum tools may remain attached to the Pivotal Nozzle Body while hose wand **20** is alternated between the hose ports on the upper and lower housings.
